QUICK START

Download the release ZIP, extract it, configure HLE, and launch. Screenshots: v0.4.0-alpha.1.

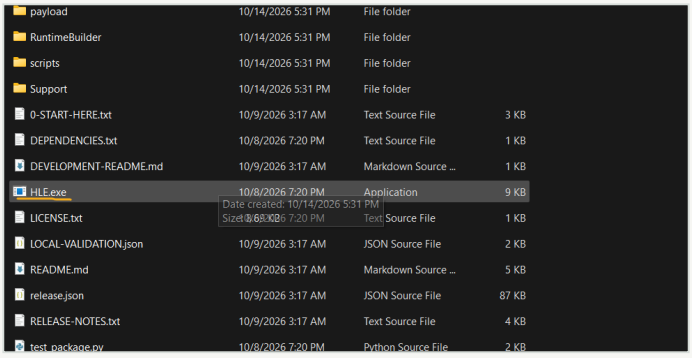

1 GET THE RIGHT ZIP

Open the **HLE Releases** page and scroll to **Assets**. Download the versioned **HLE ZIP**, not GitHub's **Source code (zip)**.

HLE Releases >

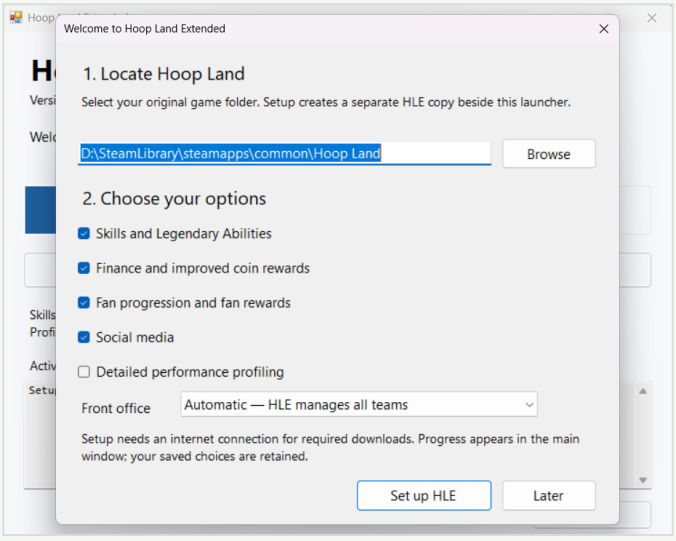

2 UNBLOCK, EXTRACT & RUN

If Windows offers **Properties > Unblock**, apply it only for a trusted download. **Extract All** outside Steam. Open the extracted release folder and double-click **HLE.exe**.

Keep all extracted package files together.

3 LOCATE, CONFIGURE & PLAY

Use Steam: **Library > Hoop Land > Manage > Browse local files** to find the original game folder. Choose modules, then **Set up HLE**. Afterwards, click **Play HLE**.

Before updating: back up your career and HLE state. To get support: **HLE.exe > Tools > Collect Report**.
