INSTALL & SET UP

An illustrated, step-by-step guide to getting **HLE** running - with screenshots large enough to follow.

GitHub releases >

This guide uses screenshots from public release **v0.4.0-alpha.1**. Always check the release page for the newest supported version.

DOWNLOAD > EXTRACT > SET UP > PLAY

Keep the extracted HLE package outside your Steam game directory.

01 / FIND THE DOWNLOAD

Open the official GitHub Releases

From the repository page, use the Releases link - not the green Code button.

1 Open the HLE repository

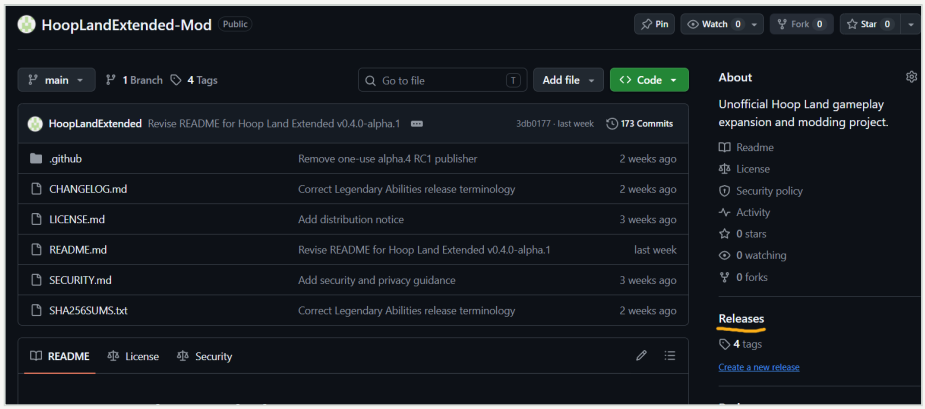

Start at the official **HoopLandExtended-Mod** GitHub repository. The **Releases** link appears under the About panel on the right.

Open official HLE repository >

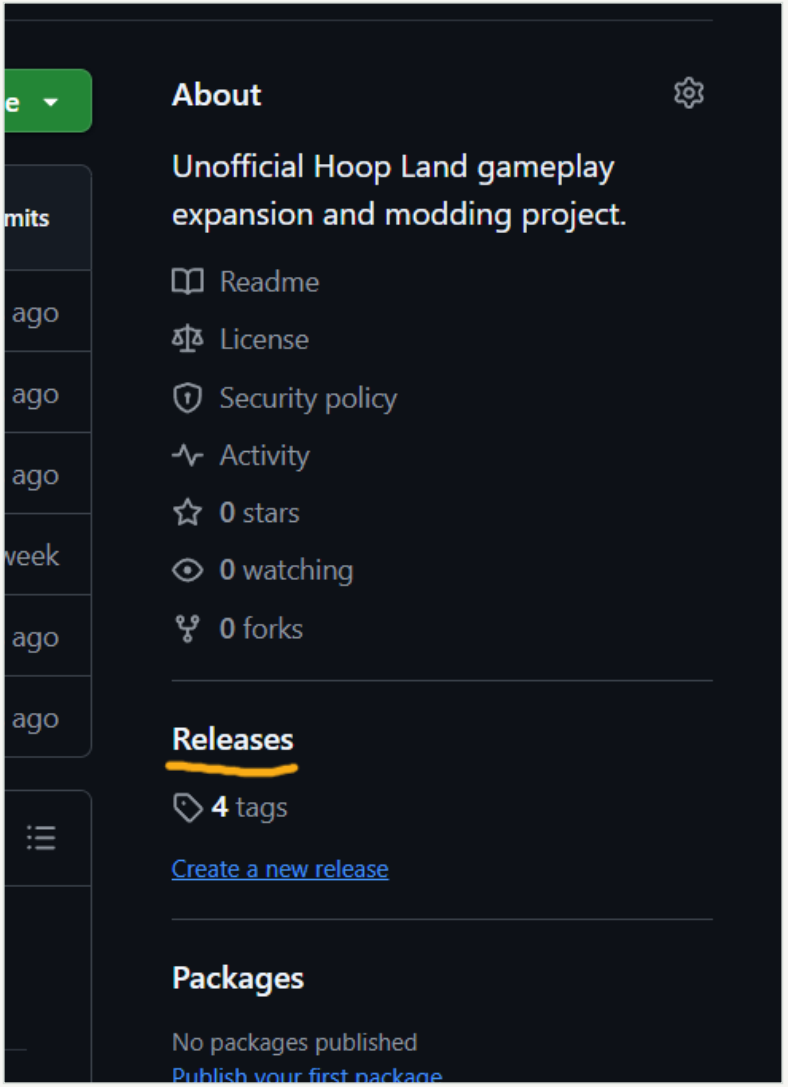

Go directly to Releases >

> The highlighted **Releases** heading opens the release list. Do not select **Code > Download ZIP** for a normal installation.

REPOSITORY HEADER / CONTEXT

ENLARGED: RIGHT SIDEBAR

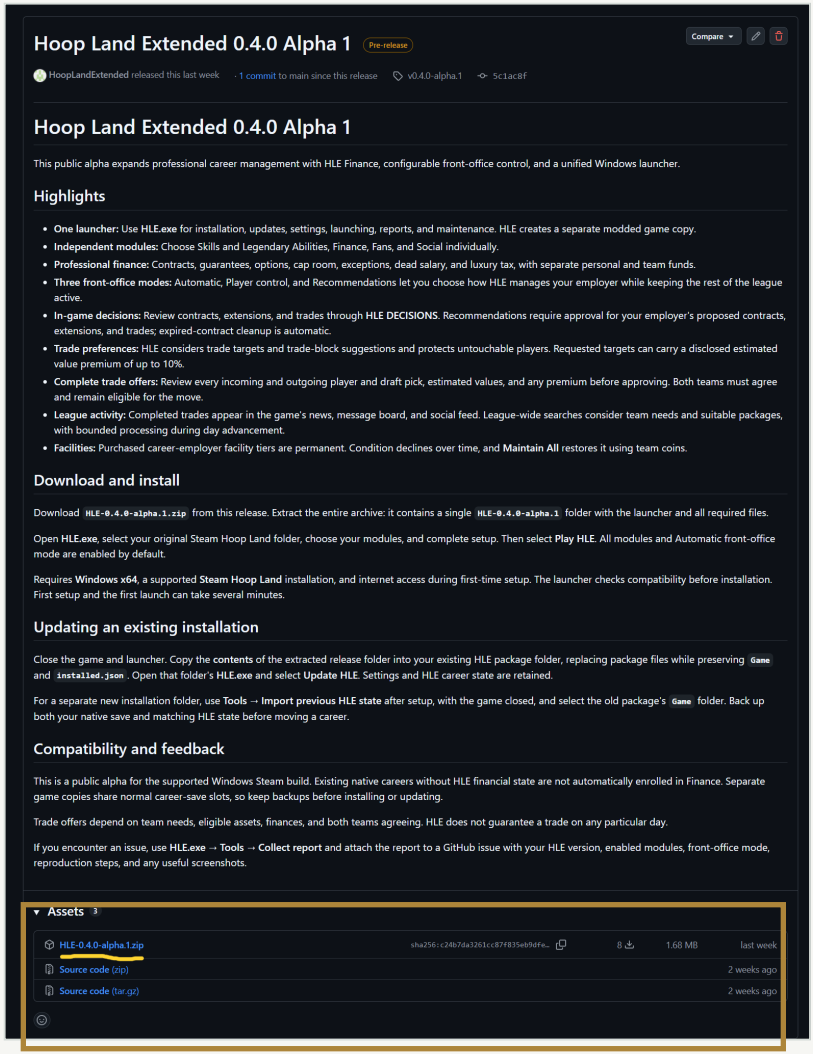

Maintainer screenshot; newer GitHub layouts may differ.

02 / CHOOSE THE FILE

Select the release asset ZIP

Scroll down the chosen release page to the Assets section and download the versioned HLE package.

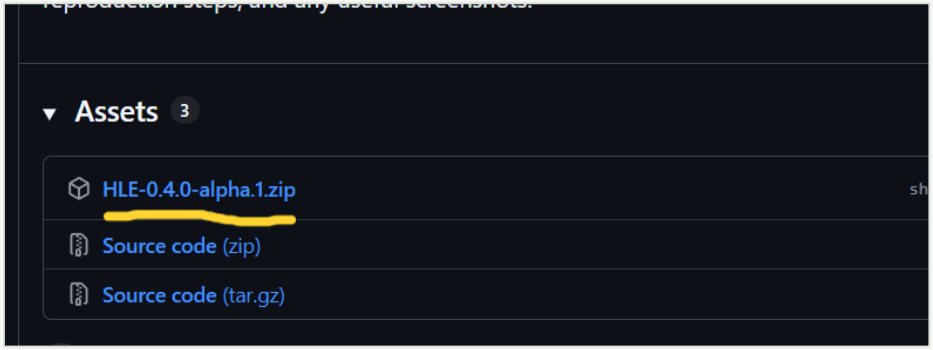

2 Download the HLE package, not source code

FULL RELEASE PAGE / ASSETS AT THE BOTTOM

In **Assets**, select the HLE release file. In this example the correct filename is **HLE-0.4.0-alpha.1.zip**. Future versions may use a different name.

ENLARGED: ASSET LIST

> **Download:** the versioned HLE ZIP.
> **Avoid:** GitHub's auto-generated **Source code (zip)** or **Source code (tar.gz)** files.

View all HLE releases >

03 / WINDOWS PREPARATION

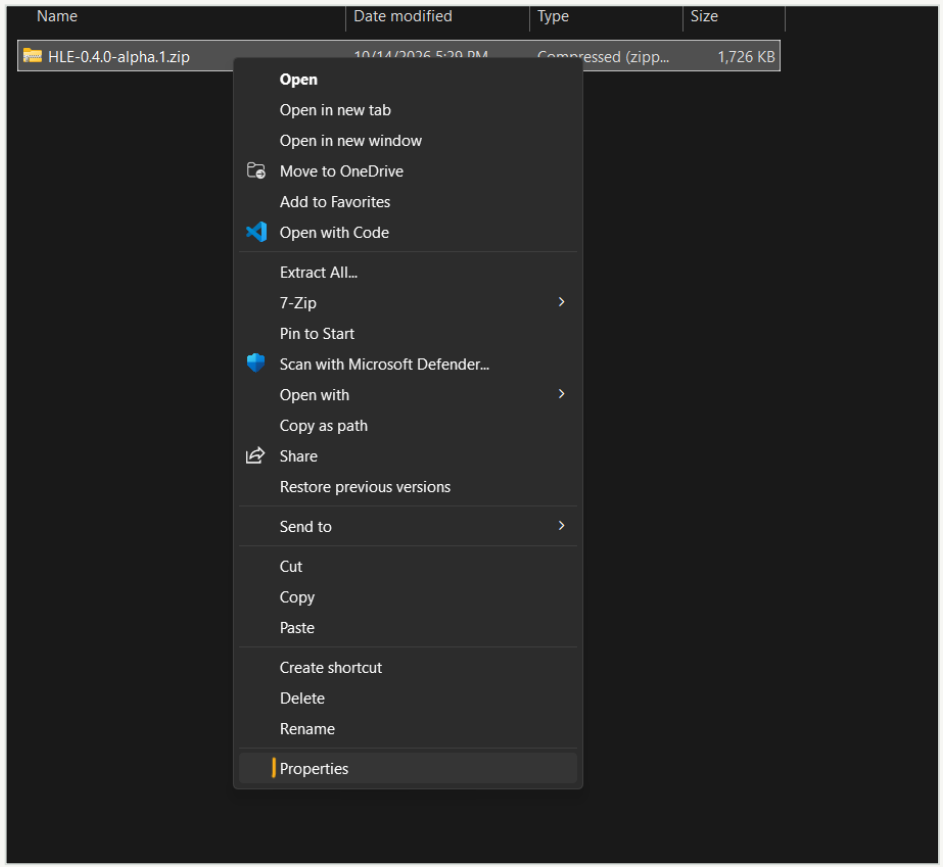

Unblock the downloaded ZIP (optional)

Windows may add an internet-download marker. Only remove it from a file you obtained from the official release.

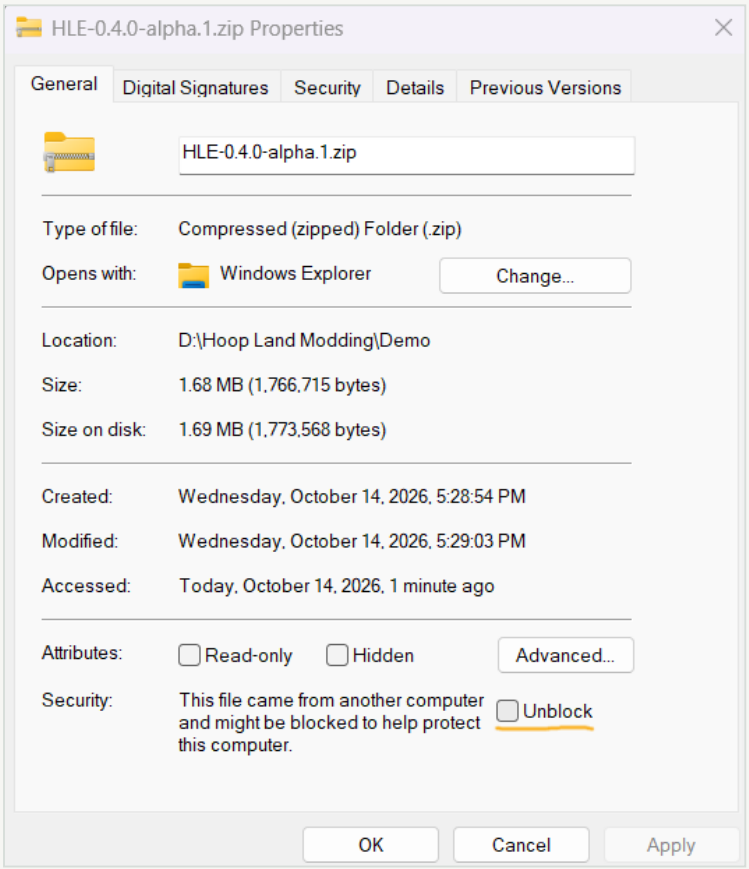

3 Right-click the ZIP, then select Properties

On the **General** tab, look for **Unblock** near the bottom. If it is present, check it and select **Apply** or **OK**. Some PCs will not show this option.

1 / ZIP FILE CONTEXT MENU

2 / WINDOWS PROPERTIES

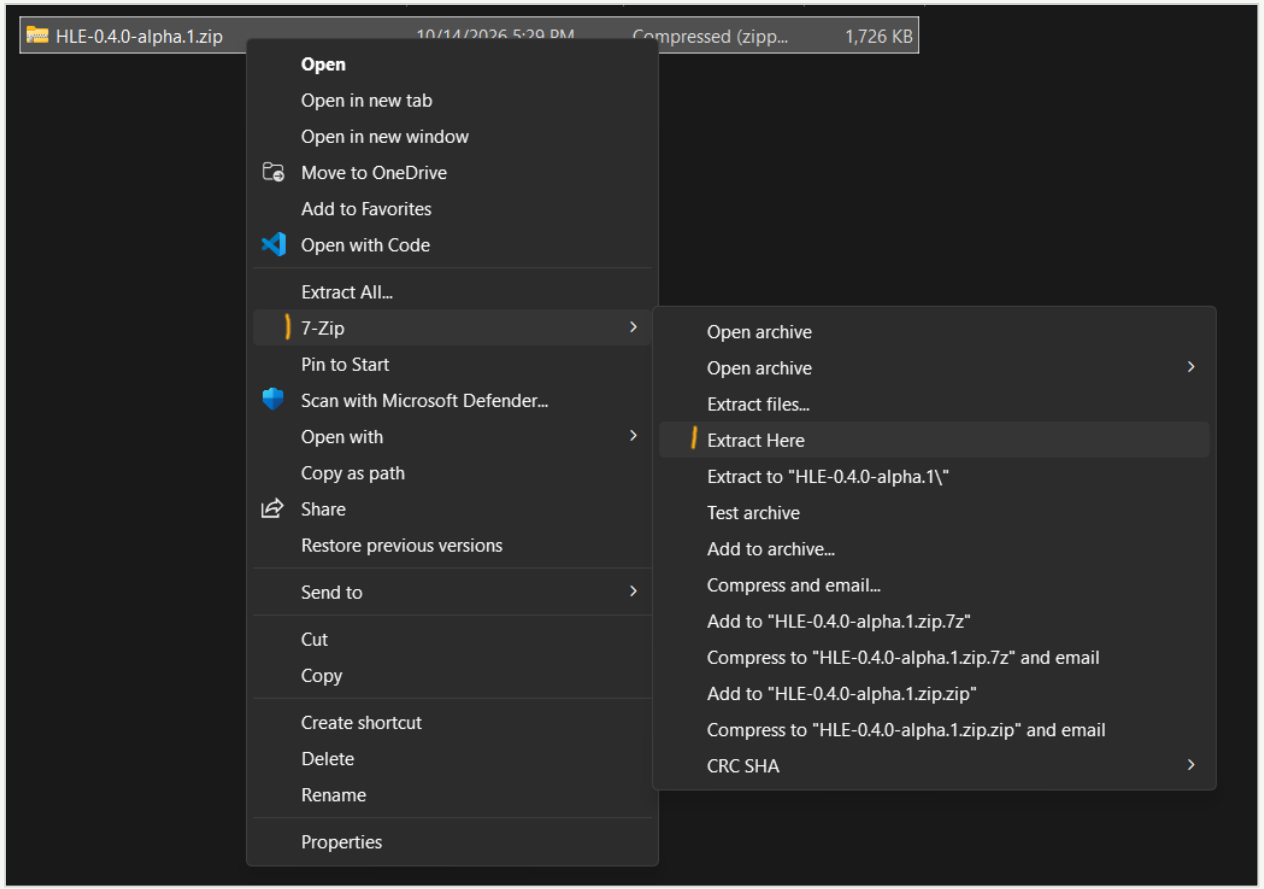

04 / EXTRACT

Extract the entire release

Use Windows Extract All or 7-Zip. Do not run HLE directly from inside the ZIP file.

4 Extract to a folder outside the Steam installation

In Windows, right-click the ZIP and choose **Extract All...**. With 7-Zip, **Extract Here** also works. The package contains a release folder with HLE.exe and its supporting folders.

COMPLETE WINDOWS MENU CONTEXT

Put HLE anywhere convenient except inside the original Steam Hoop Land folder.
HLE does not need to be on the same drive as the game.

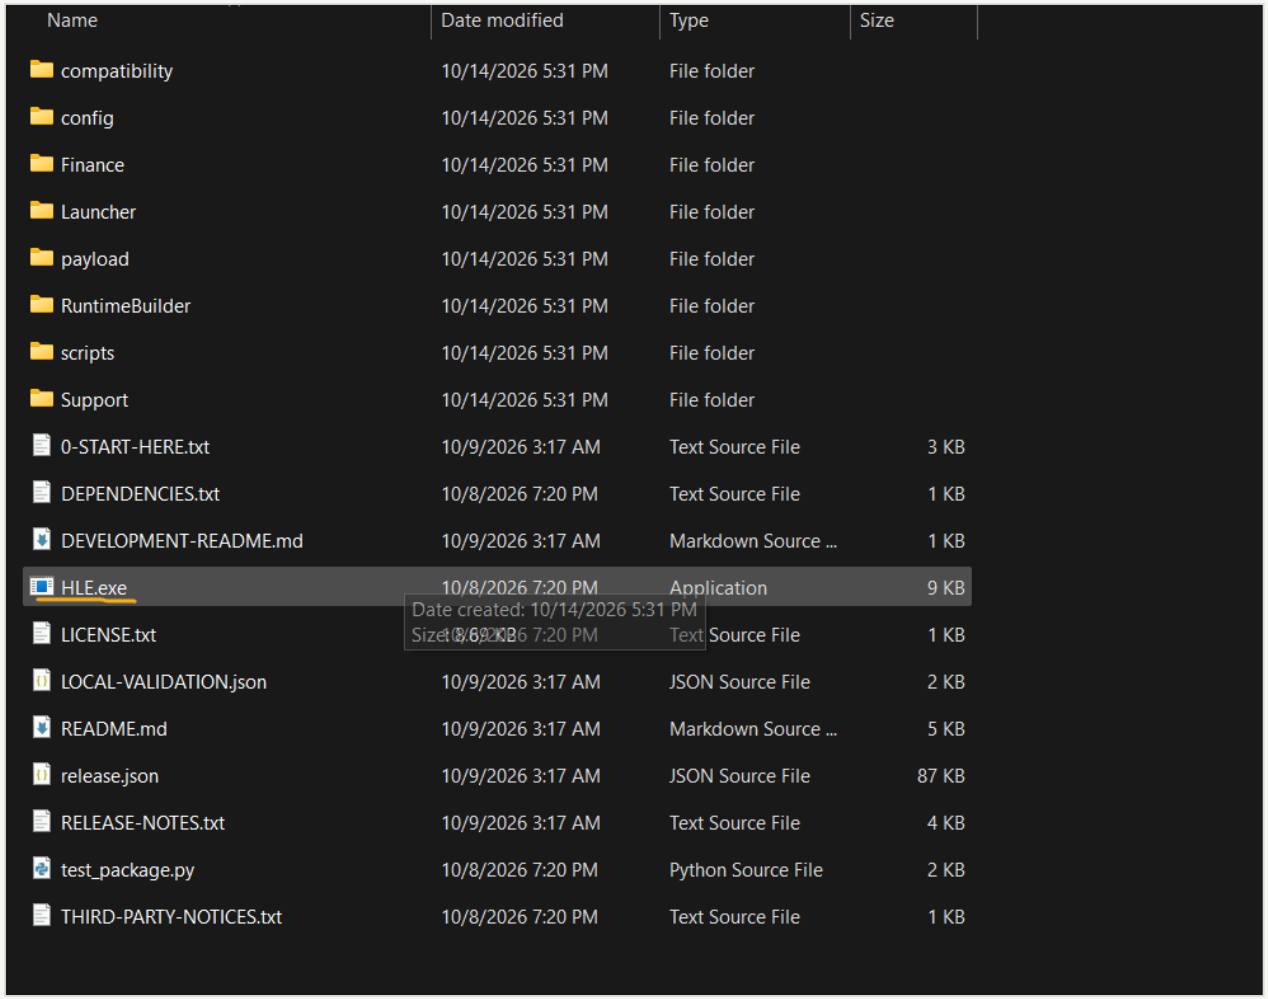

Keep the extracted files together.
Move the complete folder, not HLE.exe by itself.

05 / OPEN THE LAUNCHER

Find and run HLE.exe

After extraction, open the release folder and start the launcher.

5 Run HLE.exe from the extracted package

FULL EXTRACTED PACKAGE / HLE.EXE SELECTED

The installer is the **HLE.exe** application. Depending on Windows Explorer settings, its filename may appear simply as **HLE**.

> Keep the other package folders with the launcher. The **0-START-HERE.txt** file also provides local instructions.

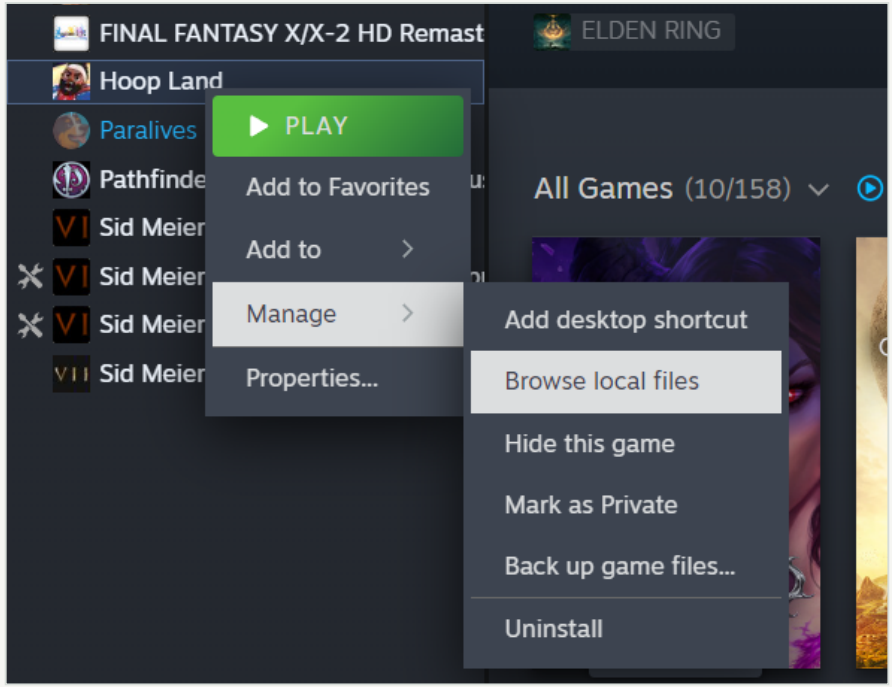

If you moved just the EXE instead of the whole extracted folder, go back and extract the complete archive.

06 / CONFIGURE

Locate Hoop Land and choose your options

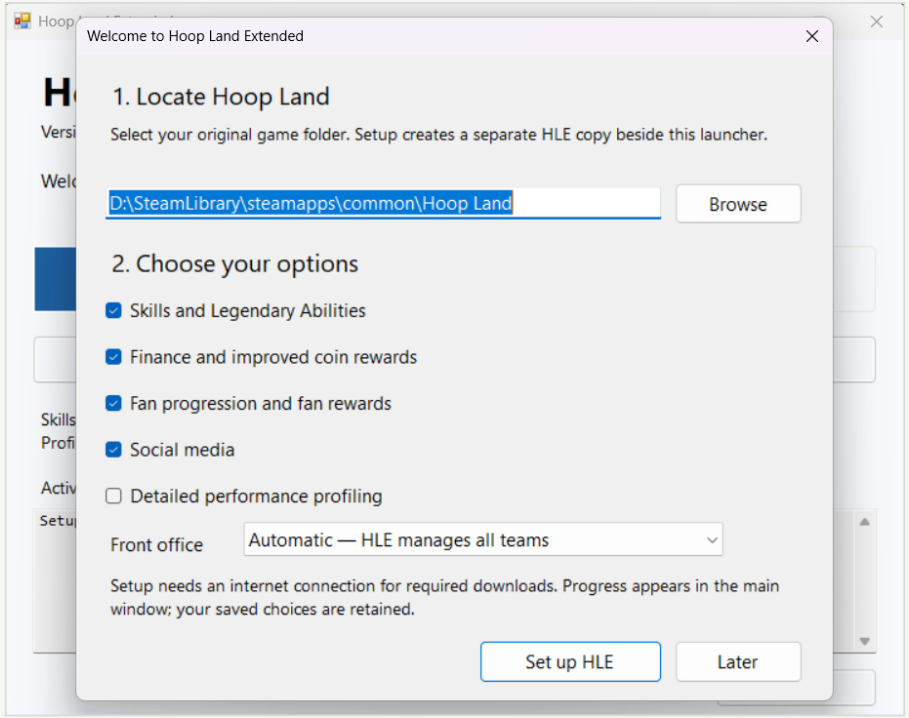

HLE needs the original Steam game folder so it can prepare its separate modded copy.

6 In Steam: Manage > Browse local files

Steam opens the correct original Hoop Land folder. Copy its path or use **Browse** in HLE to find it.

7 In HLE: Choose modules and select Set up HLE

Select modules and front-office mode, then click **Set up HLE**. The first setup may download required components.

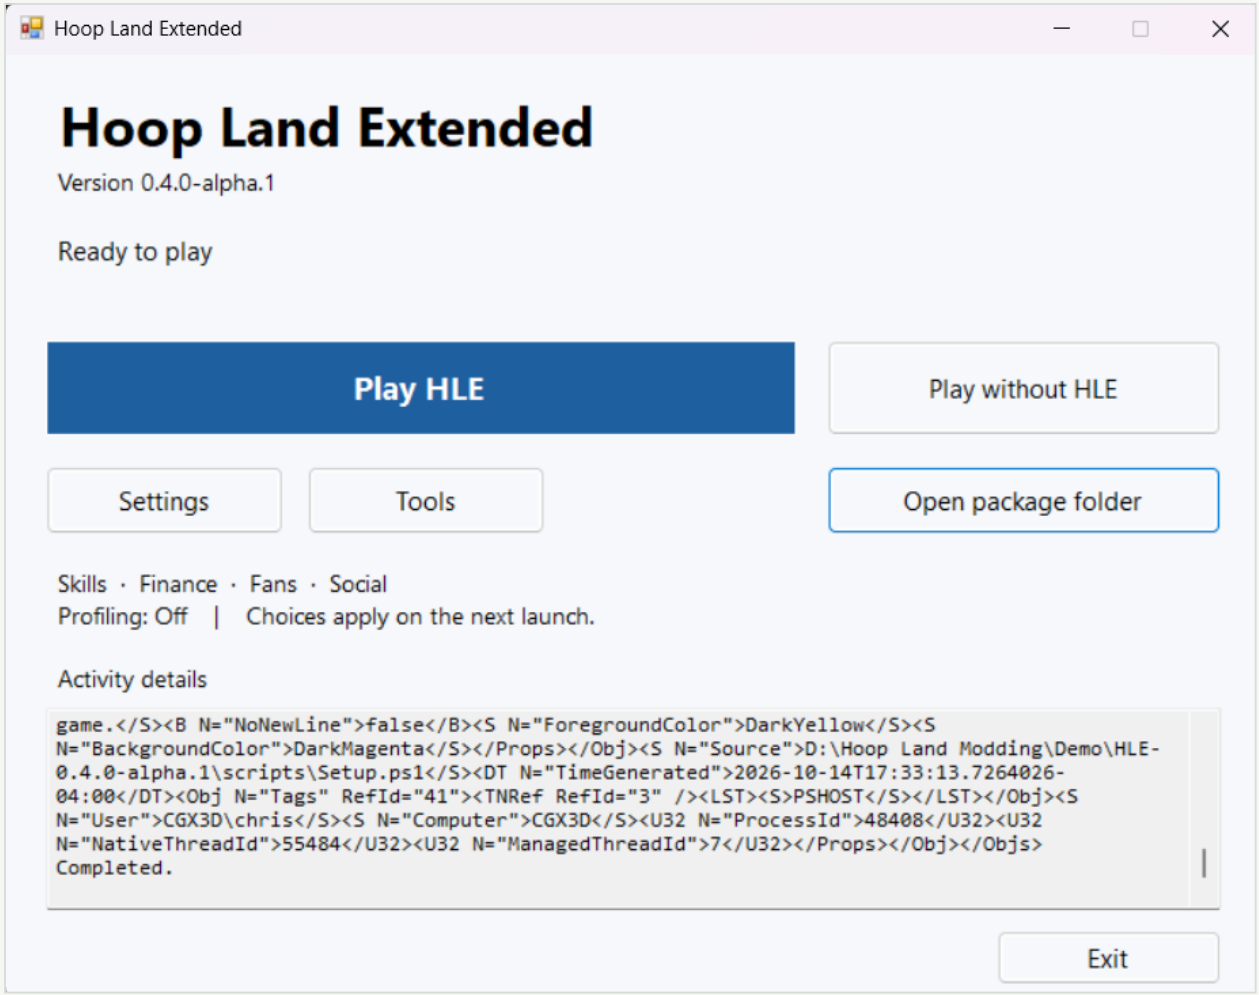

> **Important:** Point HLE to the original Steam game directory - not the extracted HLE folder or a career save folder.

07 / PLAY

Launch Hoop Land with HLE enabled

When setup finishes, you will return to the HLE launcher.

8 Select the blue Play HLE button

Play HLE runs the prepared modded game.

Play without HLE launches without the mod enabled.

Settings controls module choices.

Tools provides launcher logs, update/state tools, and report collection.

> **First launch:** the game may take longer to load. Once inside, look for the features you enabled, such as HLE Skills or Front Office.

08 / KEEP HLE WORKING

Updates, backups & troubleshooting

A few safeguards help keep your HLE setup and career saves intact.

9 Updating an existing HLE installation

1. Close Hoop Land and HLE.exe.
2. Back up native career saves and matching HLE state.
3. Download and extract the new release asset ZIP.
4. Copy the new release folder **contents** into the existing HLE package. Preserve **Game** and **installed.json**.
5. Open the updated HLE.exe and select **Update HLE** when prompted.

New separate HLE folder? Set it up first. With the game closed, use **Tools > Import previous HLE state** and select the previous package's Game folder.

COMMON PROBLEMS

Cannot find Hoop Land

Select the original Steam game folder via Manage > Browse local files.

Setup fails

Open HLE.exe > Tools and read the launcher logs. Check internet and supported game build.

No HLE features in game

Start with Play HLE; check module settings and update status; restart if settings changed.

Need help

Collect Report in HLE.exe > Tools. Attach it to a GitHub issue with versions and steps to reproduce.
